

MatSci Innovations Inc

MatSci Innovations Inc is a process solutions consulting company focused on bringing new materials synthesis, advanced fabrication, energy storage, energy conversion, and manufacturing technologies to commercial markets. Enabling green energy products is our mission and we hope to help make fossil fuels obsolete by 2035. We support start-up companies and industrial customers with C&F analysis, materials selection, fabrication trials, and process scale ups. We specialize in high purity materials, powders, advanced ceramics manufacturing, and high temperature processing. We achieve results quickly with proven experience and attention to details. Do you need to reduce defects, increase productivity, achieve better gross margins, or get past innovation roadblocks? We help get your products to market faster to enable market leadership. Current project includes ceramics component manufacturing for water filtration, diesel particulate filters, fluid energy recovery, thermal energy storage, and advanced ceramics fabrication.
